

Pigment Yellow 191 - Calcium Salt Laked Monoazo Pigment

Pigment Yellow 191 is a medium to red shade, calcium salt laked monoazo pigment. It exhibits excellent dispersibility, heat resistance, migration resistance, and good light fastness. It is mainly recommended for plastics. The pigment displays excellent solvent fastness in aliphatic and in aromatic hydrocarbons, as well as in commonly used plasticizers. However, due to its chemical structure, it suffers from poor water resistance.

PY191 is also used for hot-melt traffic paints and powder coatings.

PY191 complies with the relevant requirements of the US FDA and the EU REACH regulations.
